

Abstract:

An adjustment hook used for adjusting the length of an elastic cord, commonly referred to as a bungee cord, in which the adjustment hook can be placed on the elastic cord at a chosen length, and then used to shorten the elastic cord to that chosen length comprising: a single run of wire bent in a certain configuration whereas due to the configuration the adjustment hook can be placed on the elastic cord and then rotated in a clockwise direction causing the elastic cord to be locked in that chosen position. The adjuster's hook can be used as a puller to pull the elastic cord and then hooked on an object of choice.
